1	Introduction and scope	1
1.1	Introduction	1
1.2	Scope	2
1.3	Codes and history	2
1.4	Competency and assessment levels	3
1.5	Definitions and Abbreviations.....	4
2	Tanks and their components: Terminology and materials of construction	7
2.1	Tank components.....	7
2.2	Glossary of terms.....	9
2.3	Types of storage tanks.....	10
2.3.1	Standard atmospheric storage tanks.....	10
2.4	Materials.....	17
2.4.1	Ambient conventional storage tanks.....	17
3	Degradation mechanisms and failure modes	19
3.1	General.....	19
3.2	Corrosion	19
3.3	Tank settlement	21
3.4	Structural failure and/or failure of tank components/appendages.....	21
3.5	Material fatigue	21
3.5.1	Storage tanks can be subject to cyclic stresses	22
3.5.2	Bottom-to-shell connection	22
3.5.3	Floating roofs	23
3.5.4	Articulated pipe of roof drain systems.....	23
3.6	Combination of degradation mechanisms and other influences.....	23
3.7	Incidents, operating outside integrity operating window and emergency situations	23
4	Corrosion of tanks	25
4.1	General.....	25
4.2	Types of corrosion	25
4.2.1	Uniform corrosion	26
4.2.2	Pitting corrosion.....	26
4.2.3	Crevice / under deposit corrosion.....	27
4.2.4	Galvanic corrosion.....	28
4.2.5	Stress corrosion cracking (SCC).....	29

4.2.6	Grove corrosion to the annular plate	29
4.2.7	Microbiologically induced corrosion (MIC)	31
4.3	Corrosion rates of critical components	32
4.4	Corrosion of bottom plates.....	34
4.4.1	Failure modes.....	34
4.4.2	Bottom plate soil side corrosion.....	34
4.4.3	Bottom plate product side corrosion	36
4.5	Corrosion of shell plates.....	34
4.6	Corrosion of roof plates.....	40
4.6.1	Fixed roofs including roof support structure	40
4.6.2	Floating roofs including supporting legs.....	42
4.7	Corrosion Under Insulation (CUI)	43
4.8	Nozzles and reinforcement plates / tank mountings.....	47
4.8.1	Shell nozzles.....	47
4.8.2	Roof nozzles	48
5	General inspection techniques and interpretation of inspection data	49
5.1	References.....	49
5.1.1	Inspection and maintenance	49
5.1.2	Assessing the tank norm or standard.....	53
5.1.3	Fit-for-purpose analysis of storage tanks	56
5.1.4	Storage tank change of service considerations.....	56
5.2	Inspection.....	57
5.2.1	General.....	57
5.2.2	Operator observations.....	59
5.2.3	Routine and detailed visual inspections	60
5.2.4	In-service inspection (non-intrusive).....	61
5.2.5	Out-of-service inspection.....	62
5.2.6	Safety considerations during inspection.....	63
5.3	Inspection techniques and methodology.....	64
5.3.1	General.....	64
5.3.2	Phased Array Ultrasonic Testing (PAUT)	64
5.3.3	Alternating Current Field Measurement (ACFM)	66
5.3.4	Tank shell measurement.....	68
5.3.5	Tank bottom measurement.....	69
5.3.6	Tank roof measurement.....	72
5.3.7	Measurement of nozzles and manhole neck plates	74
5.4	Evaluation of shell inspection data.....	76
5.5	Bottom localised corrosion	79
5.6	Guidance on robotic inspection of tank floors	79
5.7	Use of drones and RPAS (Remotely Piloted Aircraft Systems) for inspection.....	80

6	Tank foundations.....	83
6.1	General.....	83
6.1.1	Introduction.....	83
6.1.2	Failure modes of tank foundations.....	84
6.2	Soil settlement.....	84
6.2.1	Settlement under loads.....	84
6.2.2	Consolidated settlement.....	84
6.3	Effects of soil settlement.....	85
6.3.1	Even (uniform) settlement.....	85
6.3.2	Tank shell settlement into the foundation.....	85
6.3.3	Difference in soil settlement between centre and periphery of the tank.....	86
6.3.4	Uneven settlement.....	89
6.3.5	Edge settlement.....	90
6.3.6	Planar tilt.....	92
6.3.7	Differential shell settlement around circumference.....	92
6.3.8	Evaluation and measurements for shell out of roundness.....	94
6.4	Leakage.....	94
6.5	Maximum tolerances and limits for settlement and out-of-verticality of tank shell.....	95
6.5.1	Out-of-verticality of the tank shell.....	95
6.5.2	Edge Settlement.....	98
6.5.3	Differential settlement.....	99
6.5.4	Sagging/centre-to-edge bottom settlement.....	102
6.5.5	Bottom ripples.....	103
6.6	Re-levelling of tank foundations.....	103
6.7	Tank lifting operations.....	104
6.7.1	Preliminaries.....	104
6.7.2	Tank lifting.....	105
6.7.3	Wind loading.....	105
6.7.4	Safety measures against wind damage.....	106
6.8	Repair/modification methods - some typical examples.....	107
7	Tank bottoms (with or without annular plates).....	109
7.1	General.....	109
7.2	Introduction.....	109
7.3	Determination of floor thickness and condition.....	113
7.4	Rejection limits.....	113
7.4.1	Floor area.....	113
7.4.2	Annular area.....	114
7.4.3	Annular projection.....	114
7.5	Bulges and depressions in tank bottom plates.....	116
7.6	Cathodic protection.....	117
7.7	Repair/modification methods - some typical examples.....	117

8 Tank shells.....	119
8.1 General.....	119
8.2 Determination of effective shell plate thickness and condition	121
8.3 Rejection limits for shell plates.....	121
8.3.1 Liquid load and vapour pressure	122
8.3.2 Wind and vacuum loads	124
8.3.3 Roof loads.....	126
8.3.4 Pit corrosion assessment	127
8.4 Minimum thickness calculations for riveted tank shells.....	128
8.5 Top wind girder and intermediate wind stiffeners.....	128
8.5.1 Shell top wind girders	128
8.5.2 Intermediate wind stiffeners	129
8.6 Buckling and deformation problems of tank shells and top wind girders.....	132
8.6.1 Buckling and deformation problems of tank shells	132
8.6.2 Shell top wind girders	135
8.7 Manholes, nozzles and connecting piping	136
8.7.1 Shell manholes and nozzles.....	136
8.7.2 Connecting piping	137
8.7.3 Rejection limits shell nozzles	138
8.8 Clean-out doors and openings	139
8.8.1 Clean-out doors	139
8.8.2 Clean-out openings.....	139
8.9 Earthing	141
8.10 Repair/modification methods - some typical examples.....	142
9 Stainless steel tanks	145
9.1 Introduction	145
9.1.1 Stainless steels	145
9.2 Properties of stainless and duplex steels.....	145
9.2.1 E-modulus	146
9.2.2 Ductility	146
9.2.3 Yield strength.....	146
9.3 Corrosion properties of stainless steel	146
9.3.1 General corrosion	147
9.3.2 Localised corrosion	147
9.3.3 Pitting corrosion	147
9.3.4 Stress corrosion cracking.....	147
9.3.5 Corrosion under insulation.....	148
9.3.6 Erosion/chemical corrosion	148
9.3.7 Galvanic corrosion.....	148
9.4 Settlement	148

9.5	Inspection.....	148
9.5.1	Inspection general corrosion.....	148
9.5.2	Inspection – pitting corrosion and stress corrosion cracking.....	149
9.6	Inspection intervals.....	149
9.7	Maintenance and repair.....	149
9.7.1	Weldability.....	149
9.7.2	Etching and passivation.....	149
9.7.3	Distortion caused by repairs.....	149
9.7.4	Hydrotesting and post repair treatment.....	149
9.7.5	Post repair treatment.....	150
10	Fixed roofs (cone roofs and dome roofs).....	151
10.1	General.....	151
10.2	Roof manholes and nozzles.....	152
10.3	Roof vents (ventilation of tanks) and emergency relief vents.....	153
10.3.1	The functioning of roof vents.....	153
10.3.2	Venting requirements for fixed roof tanks.....	154
10.3.3	Inspection and maintenance of roof vents.....	156
10.3.4	Possible ventilation problems.....	160
10.3.5	Flame arresters.....	162
10.3.6	Pressure test of the fixed roof.....	163
10.3.7	Temporary closure of openings in open vents or pressure–vacuum valves during operation.....	164
10.3.8	Protection against static electricity and lightning.....	164
10.4	Column supported roofs.....	164
10.4.1	Internal Inspection and repair.....	165
10.4.2	Tank jacking or lifting.....	165
10.4.3	Column design.....	166
10.5	Membrane (self-supporting) roof.....	166
10.6	Degradation limits for fixed roofs.....	166
10.6.1	Self supported fixed roof with supporting structure.....	166
10.6.2	Roof supporting structure.....	169
10.6.3	Self-supporting fixed roof without supporting structure.....	169
10.7	Fitness for service assessment.....	169
10.8	Internal Floating Covers (IFCs).....	171
10.9	Repair/modification methods.....	174
11	Floating roofs.....	177
11.1	Types.....	177
11.1.1	General.....	177
11.1.2	Pontoon type floating roofs.....	178
11.1.3	Double-deck floating roofs.....	179
11.1.4	Special roofs such as buoy type and radially reinforced roofs.....	180

11.2	Degradation limits.....	181
11.2.1	General corrosion	181
11.2.2	Pit corrosion	182
11.3	Equipment on External Floating Roofs.....	183
11.3.1	Roof drains.....	183
11.3.2	Floating roof seals.....	188
11.3.3	Roof support legs.....	197
11.3.4	Floating roof venting.....	199
11.3.5	Rolling ladders.....	200
11.3.6	Earthing of floating roofs.....	201
11.4	Guidelines for the operation of floating roofs.....	202
11.4.1	Introduction	202
11.4.2	Before the roof is taken into service.....	202
11.4.3	During the first month of operation	202
11.4.4	During operation	203
11.4.5	Before landing the roof	204
11.4.6	Roof standing on its supports.....	204
11.4.7	Recommended filling rates for floating roof tanks.....	204
11.4.8	Ballooning of single-deck floating roof.....	205
11.5	Possible problems with EFR buoyancy.....	207
11.5.1	Leaking pontoon compartments	207
11.5.2	Cracking in centre deck due to wind loading	207
11.5.3	Out-of-roundness tolerances.....	207
11.6	Repair/modification methods	209
11.6.1	Overplating.....	210
11.7	Snow load on External Floating Roof	210
11.7.1	Inspection history	210
11.7.2	Removal of the snow	210
11.7.3	Operation of the tank.....	211
11.8	Aluminium dome roofs	211
12	Tank appendages	213
12.1	Shell and roof nozzles.....	213
12.2	Floating suction lines.....	215
12.2.1	Design	215
12.2.2	Operational experiences.....	215
12.2.3	Inspection.....	216
12.3	Ladders, stairways, platforms/railings and lighting	216
12.4	Side entry mixers.....	217
12.5	Tank instrumentation	218
12.5.1	General/records.....	218
12.5.2	Instrument and component failure due to external corrosion.....	219

12.5.3 Electronic instruments	219
12.5.4 Tank cooling and fire protection system.....	220
13 Tank coatings.....	221
13.1 Introduction	221
13.2 External coating systems	221
13.2.1 General.....	221
13.2.2 Bottom	222
13.2.3 Shell and roof.....	222
13.3 Internal coating systems.....	223
13.3.1 General.....	223
13.3.2 Bottom	225
13.3.3 Shell and Roof.....	225
13.4 Repair/modification methods - some typical examples.....	225
14 Tank insulation	227
15 Hydrotesting	231
15.1 General.....	231
15.2 Hydrostatic testing after repair, re-siting and modification.....	233
15.2.1 Full hydrostatic test	233
15.2.2 Partial hydrostatic test.....	233
15.2.3 No hydrostatic test.....	233
15.2.4 No hydrostatic test (exemptions).....	234
15.3 Requirements for hydrotesting.....	237
15.3.1 Pipe connections	237
15.3.2 Water quality	237
15.3.3 Test temperature.....	237
15.3.4 Filling rates.....	237
15.3.5 Maximum filling height.....	239
15.3.6 Holding time.....	239
15.3.7 Emptying after hydrotest	239
15.4 Settlement monitoring.....	239
16 Resiting of vertical tanks	241
16.1 General.....	241
16.2 Moving using a crane with spreader beam	241
16.3 Moving on rail tracks.....	241
16.4 Moving by air-cushion method.....	242
16.5 Moving by floating.....	242
16.6 Moving by self-propelled trailers.....	243
16.7 Testing requirements.....	243

17 Probabilistic Preventive Maintenance (PPM) for tanks 245

17.1	Introduction	245
17.2	Inspection and Maintenance based on risk.....	246
17.2.1	Introduction to risk management.....	246
17.2.2	Asset management plan	246
17.2.3	Maintenance Maturity.....	246
17.2.4	Life Cycle Costing	249
17.2.5	Plan-Do-Check-Act Cycle of Maintenance	251
17.2.6	Set up (Plan).....	252
17.2.7	Execution (Do)	252
17.2.8	Evaluation (Check).....	252
17.2.9	Closing the loop (Act/Adjust)	252
17.3	Introduction to PPM.....	253
17.4	Risk Based Inspection (RBI)	254
17.4.1	Introduction	254
17.4.2	Methodology.....	256
17.4.3	Probability of a specific failure.....	257
17.4.4	Consequences of a specific failure.....	258
17.4.5	Risk rating.....	259
17.4.6	Determination of next required inspection date.....	260
17.4.7	RBI, THE STEPS.....	263
17.4.8	The steps 5 and 6: Calculation of interval before next inspection	265
17.4.9	Asset management plans	266
17.5	Reliability Centred Maintenance (RCM)	267
17.5.1	Tank facility Maintenance Approach	267
17.5.2	Set up Asset Register	268
17.5.3	Failure Modes & Effect (Analysis) FMEA	271
17.5.4	Criticality (Analysis)	274
17.5.5	Risk mitigation	277
17.5.6	Defining mitigating actions	277
17.5.7	Monitoring strategy.....	285
17.5.8	Reliability & Availability	286
17.5.9	Maintenance Plan	289
17.5.10	Monitoring maintenance performance	290
17.6	PPM process.....	291
17.7	PPM implementation.....	296
17.7.1	Introduction	296
17.7.2	Resources	297
17.7.3	Minimum requirements for PPM	297
17.7.4	Involvement of regulatory bodies and competent authorities.....	299

18 Mothballing	301
18.1 Introduction	301
18.1.1 Safety precautions.....	302
18.2 Protection Procedure.....	302
18.2.1 6 to 12 Months	302
18.2.2 12 to 18 Months.....	302
18.2.3 More than 18 Months.....	302
18.2.4 Floating tank roofs	302
18.3 Reducing the Risk of Internal Degradation	303
18.3.1 Instrument Air Conditions	303
18.3.2 Inerting the Tank.....	303
18.4 Reducing the Risk of External Corrosion.....	304
Appendix A Tank assessment, records and reports.....	307
A.1 Tank records.....	307
A.2 Minimum allowable thickness and shell-to-edge projection of annular plates	308
Appendix B Inspection checklists and frequencies	311
B.1 Inspection frequencies	311
B.2 Tank inspection checklist	316
B.3 Example NDT inspection sheets.....	332
Appendix C Typical repair solutions	361
C.1 Tank jacking	361
C.2 Typical repair solutions for tank foundations.....	369
C.3 Typical repair solutions for tank bottoms.....	370
C.4 Typical repair solutions for tank shells	374
C.5 Tank coating and lining.....	377
Appendix D Sample calculations	385
D.1 Stability of corroded tank.....	385
D.2 Venting.....	393
D.3 Floating roof seal design	398
D.4 Remaining life of a storage tank.....	401
D.5 Sample calculation of a corroded landing leg	403
D.6 Sample calculation for planar tilt.....	411
Appendix E Probabilistic Preventive Maintenance (PPM)	415
E.1 Asset records	415
E.2 Tank components and their typical failure modes	415
E.3 RBI calculation of the interval between inspections.....	422
E.4 Model calculations for determining interval before next required inspection	433
E.5 Methodology Reliability Centred Maintenance	455

E.6	The RCM steps	455
E.7	Model calculation for assessing consequence factor.....	464
E.8	PPM appraisal checklist	467
E.9	Determining the required maintenance tasks belonging to dominant failure mechanisms of tank components.....	472
Appendix F Reduction in Young's Modulus and Applicable Allowable Stresses in Steel components at elevated temperatures		499
Appendix G Self-supporting aluminium roofs.....		501
G.1	Introduction	501
G.2	Risks Associated with Self Supported Aluminium domes.....	502
G.3	Typical failure modes for aluminium domes.....	503
G.4	Design Considerations.....	504
G.5	Dome construction.....	512
G.6	Aluminium dome inspection and maintenance requirements	514
Appendix H (Informative) FEA Requirements regarding Fit-for-Service assessments		519
H.1	General.....	519
H.2	The FEA Report.....	519
Appendix I (Informative) Supplementary method for assessing floating roofs and fixed roofs.....		521
I.1	Introduction	521
I.2	Allowable and appearing stresses under operational conditions	521
I.3	Allowable stresses to be used for a Fit-for-Purpose analysis of floating roofs and fixed roofs according to this Publication.....	524
I.4	Verification of floating roofs	530
I.5	Verification of fixed roofs.....	538
Appendix J (Informative) Tank turnaround procedure		541
J.1	Introduction	541
J.2	Tank turnaround organisation.....	541
J.3	Workflow	542
J.4	In service scope vs out of service scope	545
J.5	Summary.....	546
References.....		547
Bibliography.....		549
EEMUA Publication: Feedback form		552
EEMUA E-Learning and Publication Catalogue		553

List of Figures

Figure 2-1	Types of fixed roof tanks (BS 2654 and EN 14015).....	11
Figure 2-2	Typical fixed roof tank.....	12
Figure 2-3	Typical floating roof tank with pontoon floating roof.....	14
Figure 2-4	Typical floating roof tank with double deck floating roof.....	15
Figure 2-5	Typical open top tank with geodesic dome roof.....	16
Figure 3-1	Shell to floor joint.....	22
Figure 4-1	Pitting Corrosion.....	26
Figure 4-2	Crevice corrosion between roof supporting structures and roof plates in the vapour space of a tank that progressed to the top side of roof plates, even leading to holes.....	27
Figure 4-3	Corrosion at flange surfaces.....	27
Figure 4-4	Under deposit corrosion tank annular projection.....	28
Figure 4-5	An example of groove corrosion.....	30
Figure 4-6	External bottom corrosion, caused by impurities in and debris on the top layer of the tank foundation.....	35
Figure 4-7	Internal shell corrosion caused by the low conductivity of the stored product.....	37
Figure 4-8	Internal shell corrosion caused by long term water contact between the rim seal and the shell when no roof movements have occurred.....	39
Figure 4-9	Progressive corrosion on a primary wind girder caused by stagnant water that could not be drained.....	40
Figure 4-10	Example of vapour space corrosion.....	41
Figure 4-11	Corrosion areas for roof supporting legs.....	42
Figure 4-12	Corrosion of landing legs of floating roofs.....	43
Figure 4-13	CUI on tank shell and top side of a secondary wind girder due to water ingress in the insulation system.....	44
Figure 4-14	External shell corrosion by CUI, away from the tank bottom when lower section of insulation is not installed.....	45
Figure 4-15	An example of corrosion under insulation.....	45
Figure 4-16	Non-conforming weatherproofing material as cover on roof insulation.....	46
Figure 4-17	Example of dead leg nozzles.....	47
Figure 4-18	Leaking tell-tale hole in reinforcement plate.....	48
Figure 4-19	Nozzle with PVV attached.....	48
Figure 5-1	Example of tank built in 1900 and still operational (courtesy of Shell).....	49
Figure 5-2	The four activities of tank maintenance.....	50
Figure 5-3	The 7 steps in the out-of-service period.....	51
Figure 5-4	Effects of mal-operation, product change or severe weather on ladder stability.....	60
Figure 5-5	Comparison of a phased array probe with conventional UT.....	64
Figure 5-6	Detection of flaws using phased array UT.....	65
Figure 5-7	Detection of defects using ACFM.....	66
Figure 5-8	Locations for bottom to shell connection UT measurements.....	71
Figure 5-9	Ultrasonic measurements for drain sumps.....	71
Figure 5-10	Typical water draw-off sump layout.....	72
Figure 5-11	Areas to be scanned on the pontoon.....	73
Figure 5-12	Areas to be scanned on roof support sleeves.....	74
Figure 5-13	Dimensions of reinforcement to be measured.....	75
Figure 5-14	Positions for UT thickness measurements on roof nozzles.....	75
Figure 5-15	A typical area of corrosion.....	77
Figure 5-16	An example of a pitted area.....	78

Figure 5-17	Robotic inspection feasibility.....	80
Figure 6-1	Tank on piled foundation.....	83
Figure 6-2	Tank shell settlement into the tank foundation.....	86
Figure 6-3	Typical effect of tank loads on soil settlements.....	87
Figure 6-4	Difference in settlement between centre and periphery.....	88
Figure 6-5	A ripple in a tank bottom.....	88
Figure 6-6	Typical location of a ripple in a tank bottom.....	89
Figure 6-7	Local uneven settlement under the tank shell.....	89
Figure 6-8	Edge settlement.....	90
Figure 6-9	Edge settlement due to penetration of the shell into the foundation.....	90
Figure 6-10	Insufficient width of tank pad shoulder.....	91
Figure 6-11	Edge settlement due to a damaged or eroded tank pad shoulder.....	91
Figure 6-12	Tilting of a tank.....	92
Figure 6-13	Differential settlement.....	93
Figure 6-14	Out of verticality.....	95
Figure 6-15	Edge settlement.....	98
Figure 6-16	Multi-lobed and twisting patterns in settlement behaviour.....	100
Figure 6-17	Differential settlement fixed roof tank.....	101
Figure 6-18	Sagging.....	102
Figure 6-19	Maximum ripple aspect ratio.....	103
Figure 6-20	A 48 metres diameter tank jacked up 2.5 metres above the foundation.....	104
Figure 6-21	Example of wind damage during construction.....	106
Figure 6-22	Example of tirsors and cleat to prevent wind damage.....	107
Figure 7-1	Flowchart assessing fit-for-purpose of tank bottom.....	112
Figure 7-2	Rejection limits annular projections.....	115
Figure 7-3	Rejection limits throat thickness fillet weld.....	115
Figure 7-4	Examples of severe corrosion of tank foundations and annular plate.....	116
Figure 7-5	Bulges/depressions without sharp edges supported by the tank foundation.....	116
Figure 7-6	Bulges not filled with foundation material.....	116
Figure 8-1	Flowchart assessing fit-for-purpose of tank shell.....	120
Figure 8-2	Holding down bolts.....	126
Figure 8-3	Main wind girder on a floating roof tank.....	129
Figure 8-4	Intermediate wind girder on fixed roof tank.....	130
Figure 8-5	Intermediate wind girder with drain mouse hole.....	131
Figure 8-6	Intermediate insulated wind girder.....	131
Figure 8-7	Fixed roof tank with buckled top courses due to wind gusts.....	133
Figure 8-8	Wind induced buckling below wind girder.....	133
Figure 8-9	Buckling due to downward load on roof and external pressure on shell.....	134
Figure 8-10	Fixed roof tank with internally corroded.....	134
Figure 8-11	Elephant's foot buckling induced by an earthquake.....	135
Figure 8-12	Empty floating roof tank collapsed during a cyclone.....	136
